Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
void reverse(int n)
{
   int rev = 0, remainder;
   while (n != 0)
    {
        remainder = n % 10;
        rev = rev * 10 + remainder;
        n/= 10;

    }
print(rev);
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

Reset answer

```
#include<stdio.h>
int main()
{
  int n,rev=0,remainder;
  int c=0;
  scanf("%d",&n);

   c++;
   c++;
   c++;
   while (n!=0)
   {
   c++;
   remainder=n%10;

   c++;
   rev=rev*10+remainder;

   c++;
   n/=10;

   c++;
   }

 printf("%d",c);
 return 0;
}
```

	Input	Expected	Got	
✔	12	11	11	✔
